Software Engineer | Backend, Full Stack | Python, React, SQL, JavaScript

EDUCATION

Drexel University

Philadelphia, PA

Bachelor of Science in Computer Science, Minor in Mathematics

Sep 2020 – Jun 2025

Relevant Courses: Data Structures and Algorithms, Software Engineering, Databases, Advanced Web Development

WORK EXPERIENCE

Software Engineer

Oct 2025 – Present

Develop For Good

Remote, CA

- Built and shipped a **full-stack food recovery platform** for Ohio organizations using **React and Python**, deploying on Vercel and integrating Google Analytics to track user activity and platform engagement.
- Led a team of 5 engineers through agile development, authored the **PRD** and technical roadmap, and presented the final product to 10+ industry engineers, earning recognition for clear product vision and user-centered design.

Backend Software Engineer Intern

Mar 2023 – Sep 2023

Rajant Corporation

Malvern, PA

- Designed a backend **RESTful API (Python/FastAPI, InfluxDB, Docker)** to ingest and standardize wearable health data, enabling compatibility with hospital records and company AI platform.
- **Optimized** queries and database schema to **reduce data retrieval times to under 50ms** and improve scalability.
- Cut **5 hours of manual work per week** by independently identifying and automating a file ingestion pipeline into cloud storage.

Product Development Engineer Intern

Mar 2022 – Sep 2022

Pression LLC

Coatesville, PA

- Automated the test data pipeline in **Python**, reducing storage costs by **25%** and minimizing data loss by **50%**.
- Led the transition of a medical device from unstable v1 prototype to **manufacturing-ready v2**, integrating **embedded C firmware** with system UI software and testing to ensure reliability.
- Refactored and fixed **2000+ lines of broken UI code** and wrote comprehensive documentation to improve maintainability and long-term scalability.
- Established the team's first **Git repository and issue tracking system**, then onboarded the next intern by documenting all system components, data flows, and code architecture.

PROJECTS

MyDailyTime | Python, FastAPI, PostgreSQL, JWT Auth

Oct 2025 – Present

- Developing a **RESTful backend API** to track daily activities and analyze time usage patterns.
- Implementing **JWT authentication** and analytics endpoints with **PostgreSQL** integration for persistent storage.
- Deploying on **AWS cloud** using **Docker and Nginx** for scalable hosting and improved API performance.

Virtual Pet | TypeScript, React, HTML/CSS, MySQL, Node.js, WebSockets

Mar 2025 – May 2025

- Built a **full-stack interactive pet simulator** with real-time chat and persistent sessions using WebSockets.
- Generated normalized **SQL** database schemas and data validation, ensuring smooth scalable performance.
- Deployed on Linode cloud server with **React, TypeScript, and MySQL**.

Bank System | Java, JUnit, Git, CI/CD, Object Oriented Programming (OOP)

Mar 2025 – May 2025

- Created a bank account management system supporting savings and checking accounts with APR calculations.
- Applied **TDD** with unit, integration, and system testing frameworks to deliver reliable and quality code.
- Set up **Git-based CI/CD pipelines** to automate builds, testing, and secure deployment workflows.

SKILLS

Programming Languages: Python, Java, C, JavaScript, TypeScript, SQL, Bash, HTML/CSS

Frameworks & Libraries: FastAPI, Node.js, React, Express, JUnit

Databases & Tools: PostgreSQL, MySQL, Git, Docker, Postman, Vim, Figma

Systems & Practices: Linux/Unix, CI/CD, Agile, DevOps, SDLC, Kanban
